

HARISH GANESAN

UB Person No: 50249122

Computer Vision and Image Processing – CSE 573

Homework 3

Homography and fundamental matrix estimation

Part 1

All values were taken upon trying different values and then performing trial and error.

- Values of all parameters are as follows :
 - Sigma value for harris – 2
 - Radius value for harris – 1
 - Threshold value for harris – 0.035
 - No. of pixels made 0 around neighbourhood pixel for “flatten” (r) – 20
 - Number of matches – 150
 - How many random pixels are taken around a point – 4
 - Minimum Distance for an inlier – 10
 - Minimum inlier ratio – 0.3
 - No. of iterations to run for – 150
- The number of inliers are 115 in this case and avg residual for the inlier is 0.77

Mapping

Combined picture after stitching

Part 2

All values were taken upon trying different values and then performing trial and error.

- Values of all parameters are as follows :
 - Number of matches – 168
 - How many random pixels are taken around a point – 8
 - Minimum Distance for an inlier – 35
 - Minimum inlier ration – $20/168 = 0.119$
 - No. of iterations to run for – 1000

For normalized = true and ground_truth = true

Mean Inlier Residual– 14.59

Residual for img1 – 0.002

Residual for img2 – 0.16

Overlay detected features (corners)

For normalized = true and ground_truth = false

Mean Inlier Residual – 13.70

Residual for img1 – 0.002

Residual for img2 – 0.156

Overlay detected features (corners)

For normalized = false and ground_truth = true

Mean Inlier Residual – 26.75

Residual for img1 – 0.002

Residual for img2 – 0.156

Overlay detected features (corners)

For `normalized = false` and `ground_truth = false`

Mean Inlier Residual – 26.75

Residual for img1 – 0.002

Residual for img2 – 0.156

Overlay detected features (corners)
